🔗 LeetCode

Summary

Backend Software Engineer with experience building scalable distributed systems using Java and Spring Boot. Skilled in designing microservices architectures, developing high-performance REST APIs, and optimizing backend services for enterprise platforms. Experienced in production incident resolution, system modernization, and performance optimization in large-scale environments.

Education

Pimpri Chinchwad College of Engineering, Akurdi

Bachelor of Technology in Computer Engineering (CGPA: 8.73)

Feb 2021 - May 2024

Pune, India

Experience

Barclays

Software Engineer

Jul 2024 - Present

Pune

- Modernized 4+ enterprise-scale legacy applications comprising **25+ services** by upgrading to the latest Java and Spring Boot stack, increasing **system stability by 40%** and reducing **maintenance overhead by 30%**.
- Architected and deployed a custom Spring Boot microservice to replace a third-party platform, **eliminating \$80K** in annual licensing costs and improving request processing **efficiency by 35%**, strengthening system reliability and customer retention.
- Orchestrated integration of **10+ microservices** using Spring Boot and RESTful APIs, scaling transaction throughput by **20%** without additional infrastructure expenditure.
- Resolved **15+ high-severity production** incidents by implementing scalable remediation strategies, decreasing recurring **production failures by 50%** and improving system availability.
- Refactored and optimized **15+ APIs** by upgrading dependencies and applying modular architecture principles, reducing **debugging effort by 40%** and accelerating **release velocity by 25%**.
- Implemented **region-based server routing** and asynchronous processing, **reducing response time by 60%** and doubling throughput, enabling the platform to handle peak traffic and driving an estimated **\$200K+ annual revenue increase** through enhanced user experience.

Barclays

Software Engineer Intern

Jun 2023 - Aug 2023

Pune

- Developed and deployed a Windows service using C# and .NET, eliminating reliance on Jenkins-based pipelines and establishing automated CI/CD workflows **supporting 20+ builds** per week.
- Designed and optimized MS SQL database schemas and indexing strategies, enhancing data retrieval efficiency and **improving query performance by 40%**.
- Streamlined data-processing workflows, reducing deployment **cycle time by 30%** and **increasing system uptime by 20%**.

Skills

Languages: Java, C#, JavaScript, C++, SQL

Frameworks & Libraries: Spring Boot, Spring MVC, Spring JPA / Hibernate, .NET, Node.js

Databases: MySQL, Oracle, MS SQL, MongoDB, H2

Messaging & APIs: Apache Kafka, REST APIs, Asynchronous Processing

Testing: JUnit 5, Mockito, Integration Testing

Achievements

- Second Runner-up in the Coding Competition for Pune University among 400+ applicants and 150+ teams.
- Co-Secretary, IEEE Student Branch PCCOE, overseeing hackathons and managing workshop budgets.
